

Ano Polish

(Ambruch 1 / Rusafix)

Tested and recommended by Qualicare and GRM/Germany.

Applicable for:

Cleaning and preservation of all kinds of anodised surfaces and stainless steel.

Composition and characteristics:

Ano Polish is a Silicon-based product for the cleaning and preservation of anodised surfaces and stainless steel. It contains grease removers and cleaning substances. Ano Polish is quick and easy to use, highly efficient and quick drying.

Instructions for use:

Essential – always carry out a test area first!

Shake well before use. Do not use on hot surfaces. No warranty for incorrect use.

New, slightly soiled surfaces:

Apply a thin layer using a soft soaked cloth. Allow to dry for a few seconds, then polish using a new soft cloth.

Medium soiled surfaces:

Apply Ano Polish onto a 3M Scotch-Brite cleaning pad (red or grey) and apply evenly with medium pressure. Remove dissolved soiling with a soft cloth. If necessary repeat until all soiling and stains are removed. Then polish with a new, soft cloth for an even appearance.

Heavily soiled surfaces:

Carry out the same procedure as for medium soiling but with the additional use of Basic Ano Powder for more abrasion. The Ano Powder has to be removed completely with a cloth or by washing down before polishing with Ano Polish.

Safety information:

Avoid open flames and sources of ignition. Store in a frost-free place.
