

Qualicon

Tested and recommended by Qualicare and GRM/Germany.

Applicable for:

Cleaning and preservation of all kind of anodised surfaces and stainless steel

Composition and characteristics:

Qualicon is a specially designed product, containing solvents, for protective care of anodised surfaces. It contains water protective waxes and equalizes the appearance. Quick and easy to use, high efficiency, with good weather resistance.

Instructions for use:

Essential – always carry out a test area first!

Shake well before use. Do not use on hot or wet surfaces. No warranty for incorrect use.

New, slightly soiled surfaces:

Apply a thin layer using a soft soaked cloth. Allow to dry for a few seconds. Polish after short while using a clean, soft cloth. Produces a shiny, waterproof, thin layer.

Medium soiled surfaces:

Apply Qualicon onto cleaning pad (red or grey) and brush evenly with medium pressure. Remove dissolved soiling with a soft cloth. If necessary repeat until all soiling and stains are removed. Then polish with a new, soft rag for even appearance.

Heavily soiled surfaces:

Carry out basic cleaning with use of Basic Ano-powder and Cleaning Pad (red) for more abrasion. The Ano-powder and all detergent residues have to be removed completely by washing down and flushing with fresh water before polishing.

Safety information:

Flammable. Avoid open flames. Harmful. Store in a cool, dry place

Class 3 Code F 1 UN 3295 VbF: A II

Environmentally toxic, contains solvent naphta
